

e-Thesis Elaion

The challenges of competition and the modern demands placed throughout the production phase and the commercial management of a Greek olive mill are too numerous to be resolved... using old tools. Technology is evolving rapidly, and the benefits offered daily to entrepreneurs are multiple and too valuable to ignore.

CGSoft, responding to the daily demand of many companies, for a software solution for integrated management of olive oil production, from olive cultivation to final standardization and distribution, developed and offers e-Thesis Elaion, the most modern, web, Greek application for the integrated management and operation of olive mills, fully adjustable to the size, activities and specific needs of each business

The e-Thesis Elaion solution:

- · Records in detail the information of olive groves and varieties.
- · Produces solemn declarations, declarations of agricultural parcels, inputsoutputs etc.
- Monitors and records multiple weighings simultaneously
- · Checks and adjusts production to the requirements of characterization, based on the International Olive Council (virgin extra or fine, refined, pure), the production method (green olive oil, organic), the characterization (PDO, PGI) and so on.
- · Records the conversion of kilograms into liters, etc.

- Calculates the wastage in all phases of production (defoliation, washing, grinding, kneading, pressure or centrifuge, sieve, oil separator, etc.)
- Monitors additive consumption during production.
- Monitors the export of byproducts (goat, kernel).
- Manages the content and details of available tanks in multiple production lines and records transfusion dates.
- Maintains detailed data on bottling and chemical analyses, olive paste temperature meters, olive paste/water ratio, tasting sheets, etc.
- Manages semi-finished products and private labels.
- Supports full history by batch, varieties, crops, etc.
- Ensures full online traceability.
- Offers detailed costing etc.

The **e-Thesis Elaion** application is complemented by the other products of SoftOne & Entersoft group of companies: e.g. ERP, Business Intelligence (BI), customer relations (CRM) and eShop subsystems for online sales, BPM for Business Process Management, outsourcing and task management applications (e.g. agronomists) etc. These products allow the user to have access to numerous features, such as integration, operational completeness, interconnection of production with commercial management and promotions, reliability or scalability, etc. and all that, with a reasonable purchase and maintenance cost. Finally, because everyone's needs are constantly changing, the **e-Thesis Elaion** application makes sure to offer the possibility of unlimited, immediate and secure extensions.

The use of the application ensures to the olive grower:

- ✓ Direct control and increase in productivity
- ✓ Reduced operation and production costs
- ✓ User-friendly computer system
- ✓ Cutting edge against the competition
- Online, complete and fully usable information for business decision making

Operational problems of the past have been resolved, the management knows where, when and how to act to advance the development of the company, with the necessary safety and quality of products. The multitude of built-in out-of-the-box reports search, correlate and distribute information based on business entities (e.g. product, olive grove, etc.) and users, starting from an entity, are automatically informed about each connected concept.
